

UI Developer Task Instructions

IMPORTANT:

THIS TASK MUST BE COMPLETED EXCLUSIVELY BY YOU. NO EXTERNAL HELP OF ANY KIND IS ALLOWED. IN CASE THESE REQUIREMENTS ARE NOT MET, WE RESERVE THE RIGHT TO WITHHOLD PAYMENT.

Objective: Create an intuitive, functional, one-page financial dashboard for displaying details and summaries of data collected throughout the platform.

Summary: Our platform creates **timesheets** for the employees of our clients. This time is measured in hours. Some of these hours are considered “SR&ED” hours. Our goal is to display how many hours are tracked for the employees and use the financial data to project credit amounts.

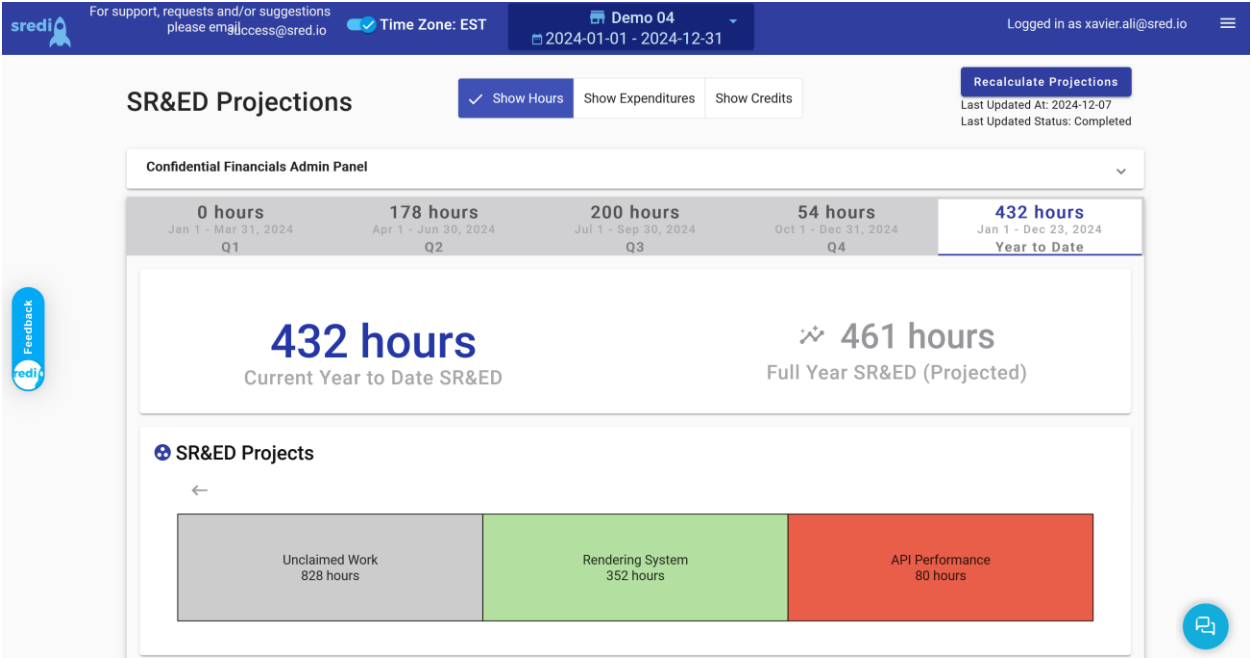

Information to Display:

1. Include a header with client information
2. Include a navigation bar
3. Include a grid that shows every employee and their annual salary as well as the equivalent hourly rate
4. Include a chart that shows for each project, how many hours were worked on the project and what that will translate to in a monetary amount
 - a. E.g. Person A worked 10 hours at \$100/hour, Person B worked 20 hours at \$20/hour, Person C worked 50 hours at \$10/hour = Project total is 80 hours and a total of \$1900
5. Include a chart that sums up all of the projects, demonstrating the total hours for each project and the monetary amount for each project as well as a summing of all hours across all projects and all amounts across all projects
6. Include a projection for the remainder of the year – how many hours should the company expect across all projects and what is the total monetary amount for the whole year?

Please feel free to add visualizations that help the user to understand the answers to the above questions.

This task is designed to be interpreted as written. Make your own decisions if anything is ambiguous. Unless absolutely necessary, do not reach out to the team with questions that you can find on your own.

Current Graphics (for further clarification ONLY. It is not required to replicate these.)
